

# THE KADARN OPERATING PRINCIPLES

## Every Product Decision Must Answer One Question

Does this increase institutional capability, continuity, trust, or opportunity?

If the answer is no, it probably does not belong in Kadarn.

---

## Principle 1

### Institutions Create Scientific Value

Patients participate.

Researchers discover.

Sponsors fund.

But institutions execute.

Kadarn exists to strengthen institutions.

---

## Principle 2

### Experience Never Starts From Zero

Organizations accumulate knowledge.

Every study.

Every audit.

Every shipment.

Every biospecimen.

Every success.

Every lesson.

Kadarn preserves that experience forever.

---

## **Principle 3**

### **Evidence Before Claims**

Claims are useful.

Evidence creates trust.

Every capability should become evidence-backed.

---

## **Principle 4**

### **Trust Is Earned**

Trust is never assigned manually.

Trust grows through verified operational history.

---

## **Principle 5**

### **Opportunity Follows Capability**

Organizations should receive opportunities because they demonstrated capability.

Not because they belong to closed networks.

---

## **Principle 6**

### **The Site Owns Its Reputation**

Clinical performance belongs to the organization that earned it.

Not to a broker.

Not to a CRO.

Not to a sponsor.

---

## **Principle 7**

### **Kadarn Never Creates Vendor Lock-In**

Organizations must own their institutional history.

Kadarn is a steward of trust.

Never the owner of institutional identity.

---

## **Principle 8**

### **Technology Exists To Reduce Friction**

Every feature must remove complexity.

Never create more.

---

## **Principle 9**

### **AI Assists**

AI recommends.

Evidence decides.

Humans remain accountable.

---

## **Principle 10**

### **Grow The Ecosystem**

Kadarn wins when:

Sites grow.

Sponsors find better partners.

Patients gain more opportunities.

Research accelerates.

The ecosystem becomes stronger.

Kadarn never wins by making another participant weaker.
